

Soto's corner - E-commerce

A family member asked me to help set up an e-commerce website for their new company with limited funds. To minimize costs, I developed the site using **WordPress**. I handled the entire setup process, including hosting, SSL configuration, WordPress installation, and plugin management. Additionally, I provided training to ensure they could easily manage the platform on their own.

While the initial setup is complete, the development is ongoing as we continue to personalize the website to better suit their brand and business needs.
