

Oscar Lambret Hospital

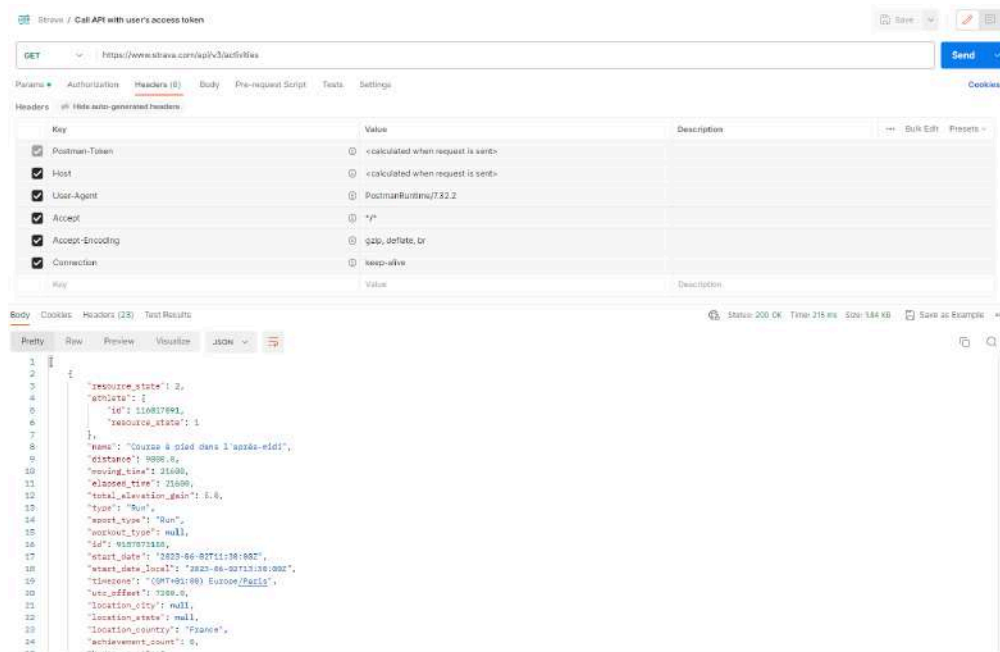

A hospital approached us to create a website aimed at raising awareness about cancer. Their idea was to build a platform where people could donate either money or kilometers by running. To register kilometers, donors needed to connect their running apps to the website. The client also requested a live counter for their social media metrics, including Twitter followers, YouTube views, and more.

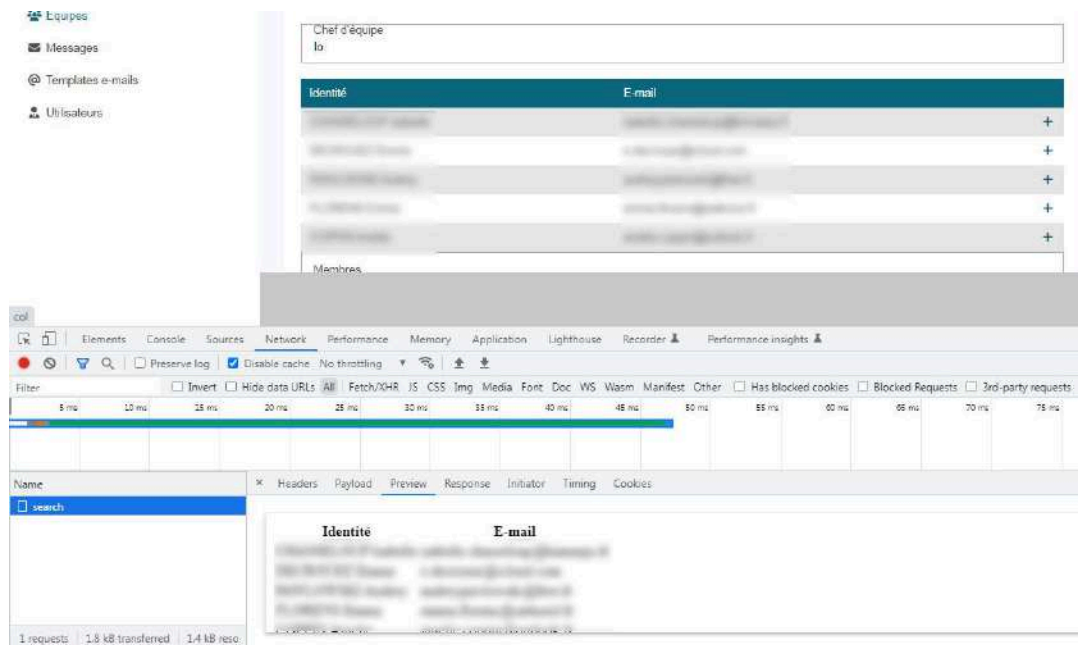

Display of teams and the number of kilometers.

Conceptual Data Model

API tests.

Admin panel using AJAX for searching teams.

User's profile.
